# docker image

Usage:  docker image COMMAND

Manage images

Commands:
  build      Build an image from a Dockerfile
  history    Show the history of an image
  import     Import the contents from a tarball to create a filesystem image
  inspect    Display detailed information on one or more images
  load       Load an image from a tar archive or STDIN
  ls         List images
  prune      Remove unused images
  pull       Download an image from a registry
  push       Upload an image to a registry
  rm         Remove one or more images
  save       Save one or more images to a tar archive (streamed to STDOUT by default)
  tag        Create a tag TARGET_IMAGE that refers to SOURCE_IMAGE

Run 'docker image COMMAND --help' for more information on a command.

# apt install systemctl -y
Solving dependencies... Error!
Some packages could not be installed. This may mean that you have
requested an impossible situation or if you are using the unstable
distribution that some required packages have not yet been created
or been moved out of Incoming.
The following information may help to resolve the situation:

Unsatisfied dependencies:
systemctl : Conflicts: systemd but 257.7-1 is to be installed
Error: Unable to correct problems, you have held broken packages.
Error: The following information from --solver 3.0 may provide additional context:
Unable to satisfy dependencies. Reached two conflicting decisions:
1. systemd:amd64 is selected for install because:
   1. systemd-sysv:amd64 is selected for install
   2. systemd-sysv:amd64 PreDepends systemd
2. systemd:amd64 is available in versions 257.7-1, 259-1
   but none of the choices are installable:
   - systemd:amd64=257.7-1 is not selected for install because:
     1. systemctl:amd64=1.4.4181-1.1 is selected for install
     2. systemctl:amd64 Conflicts systemd
     [selected systemctl:amd64]
   - systemd:amd64=259-1 is not selected for install because:
     1. systemctl:amd64=1.4.4181-1.1 is selected for install as above
     2. systemd:amd64=259-1 Conflicts systemctl
